USAI BeveLED

By: [Jennifer Brite](#)

BeveLED from USA Illumination is a recessed, adjustable LED downlight. It features interchangeable lenses that allow for beam spread adjustment based on a space's lighting needs. The fixture's die-cast aluminum trims are available in a variety of finishes, including trimless, round, and square with an All-Ways Square recessed housing (which allows for alignment with a square aperture). It features high-efficiency 10W and 20W 3,000 K tightly binned LED light engines that are field replaceable and contribute toward energy and cost savings.
